

FLoid Cell Imaging Station Demo at the Bugnon facility

Contributed by Yannick KREMPP
Monday, 12 March 2012

Invitrogen was kind enough to install a demo system of their latest device: FLoid Cell Imaging Station, within the CIF Bugnon.

This system provides a very simple and straightforward way to acquire basic images of tissue and cells (living or not), in brightfield or fluorescence.

A full description of the system is available directly on Invitrogen's website.

You can request a demo with your own sample simply by emailing either Jean-Yves Chatton or Yannick Krempp (both @unil.ch). The demo system will be available until Thursday the 15th.

The CIF Staff.
