

ATLAS cleanup is complete.

Contributed by Yannick KREMPP
Wednesday, 27 June 2012

The cleanup is over and ATLAS is fit again. Around 4 Terabytes (4Tb, that is 4'000 Gigabytes) of data has been deleted, and we have now 4 Tb of free space.

We plan to do such a cleanup on regular basis (maybe once a year), so please consider transferring your files on the storage device of your choice whenever it's possible.

If some critical files have been deleted by mistake, please contact Yannick KREMPP for support.
