Dear CIF
users,

We are currently in the process of migrating all our users to a new file server. This new server, ATHENA, based on Synology technology is more modern, robust, and has many more other advantages over the current system we use, ATLAS. The migration process will take time (several months at best), so you will be informed via email when your account has been processed.

The new server has a data cap of 15 GB per user, so those who already have more than that won't be able to add data to their home folder on ATHENA until they make room for it.

Special accounts will be treated separately, on a case-by- case basis.

Of course, if you encounter issues of any kind, please refer to Yannick KREMPP at yannick.krempp@unil.ch.

The CIF Staff.
