

## CZI Batch Converter for Axioscan Z1 users

Contributed by Yannick KREMPP  
Tuesday, 12 April 2016

Many CIF users have trouble dealing with the CZI files encoded with JPEG XR from the slide scanner. Here's a workflow you can use for your images:

Carl Zeiss offers a free software to handle CZI files acquired using the Zeiss Axioscan Z1 slide scanner.

It comes as a zipped folder. Just unpack it and use the "CZItoTIFFBatchConverter.exe" program.

Please read carefully the PDF manual included to understand how it works

Tested and working on Windows 7 X64 with default options. You can open the BigTIFF files in Photoshop, make your adjustments, and export them in whatever format you'd like from there.

You can download it below or in the downloads section, as a registered user.
