

New operation manual for the Axioimager setup at the Bugnon

Contributed by Yannick KREMPP
Monday, 27 April 2009

Finally the new short guide on how to use the Axiovision setup at the Bugnon campus has arrived. This manual is specific to the system installed at the Bugnon campus, but some of its information can also be useful for people using other systems, keeping in mind some settings and features may vary from a system to another.

For those who are interested in more in-depth information about the software, Zeiss has published a short guide with some nice examples on how to use functions like measurements, adding annotations, exporting files and so on...

Head to the download section to get them.
